

OC IT Projects – Chapter 11

Networking Tools and the Command Line – Review + Quiz

Important Points

- Multimeter = electrical measurements.
- Loopback Plug = test a network interface/port.
- Crimper = attach an RJ-45 connector.
- Cable Tester = test cable wiring.
- Cable Certifier = verify cable performance/specifications.
- Punch-Down Tool = terminate wires in a punch-down block.
- Toner Probe = locate/trace a cable.
- TDR/OTDR = locate cable faults and distance to a fault.
- Protocol Analyzer = analyze packets/network traffic.
- Wireless Analyzer = analyze wireless networks/signals.
- Speed Test Sites = measure connection speed.
- Environmental Monitoring = monitor environmental conditions.
- Remote Connectivity Software = remote access/management.
- Windows commands: arp, ipconfig, ping, tracert, nbtstat, netstat, nslookup, route.
- UNIX/Linux equivalents covered: arp, ifconfig, ping, traceroute, netstat, nslookup, route.
- arp = IP-to-MAC/ARP information; ping = connectivity; tracert/traceroute = path/hops; nslookup = DNS; route = routing table; netstat = connections/ports; nbtstat = NetBIOS.

Your previous result: 26/30 (86.7%)

Mistakes to review: Q2, Q23, Q25, Q28.

Chapter 11 – 30 Question Quiz

1. Which tool is primarily used to make electrical measurements?

A) Cable Tester B) Multimeter C) Toner Probe D) Crimper

2. Which tool tests whether a network interface or port can send and receive correctly?

A) Loopback Plug B) TDR C) Punch-Down Tool D) Cable Certifier

3. Which tool attaches an RJ-45 connector to a cable?

A) Cable Tester B) Toner Probe C) Crimper D) Multimeter

4. Which tool is used to test cable wiring?

A) Cable Tester B) Loopback Plug C) TDR D) Butt Set

5. What is the main purpose of a cable certifier?

A) Find DNS servers B) Verify cable performance specifications C) Trace an IP route D) Capture packets

6. Which tool terminates wires in a punch-down block?

A) TDR B) Crimper C) Punch-Down Tool D) Toner Probe

7. You need to identify which physical cable runs to a wall jack. Which tool is most appropriate?

A) Toner Probe B) Multimeter C) Cable Certifier D) Loopback Plug

8. A technician needs to determine the distance to a fault in a copper cable. Which tool is best?

A) Crimper B) TDR C) Protocol Analyzer D) Wireless Analyzer

9. Which tool analyzes packets and network traffic?

A) Speed Test B) Protocol Analyzer C) Punch-Down Tool D) Toner Probe

10. Which tool is most useful for analyzing wireless networks and signals?

A) Wireless Analyzer B) TDR C) Butt Set D) Multimeter

11. What does a speed test site primarily measure?

A) DNS records B) Cable pinout C) Connection speed D) Routing table entries

12. What is the purpose of environmental monitoring?

A) Monitor physical/environmental conditions B) Resolve hostnames C) Test RJ-45 connectors D) Display ARP entries

13. Which software category provides remote access or management?

A) Protocol Analyzer B) Remote Connectivity Software C) Wireless Analyzer D) Speed Test

14. Which Windows command displays IP configuration information?

A) ping B) route C) ipconfig D) nbtstat

15. Which command is primarily used to test basic network connectivity?

A) ping B) nslookup C) arp D) netstat

16. Which Windows command shows the path/hops to a destination?

A) ipconfig B) tracert C) route D) arp

17. Which Windows command is associated with NetBIOS information?

A) netstat B) nbtstat C) nslookup D) ping

18. Which command displays network connections, ports, and statistics?

A) netstat B) tracert C) ipconfig D) arp

19. Which command is used for DNS lookups?

A) route B) ping C) nslookup D) nbtstat

20. Which command is used to view/manage the routing table?

A) route B) ping C) ipconfig D) nslookup

21. On UNIX/Linux, which command corresponds to Windows ipconfig in this chapter?

A) traceroute B) ifconfig C) netstat D) route

22. On UNIX/Linux, which command corresponds to Windows tracert?

A) ping B) arp C) traceroute D) nslookup

23. You can see the correct cable but cannot tell which cable in a bundle goes to a specific endpoint. What should you use?

A) Multimeter B) Toner Probe C) Cable Certifier D) Speed Test

24. A cable passes a basic wiring test, but you need to verify required performance specifications. What should you use?

A) Cable Tester B) Crimper C) Cable Certifier D) Loopback Plug

25. You need to determine whether an intermittent cable issue involves a fault and how far away it is. Which tool is most useful?

A) TDR B) Wireless Analyzer C) Punch-Down Tool D) Speed Test

26. You need to determine whether a remote host is reachable before troubleshooting further. Which command should you try first?

A) route B) ping C) nslookup D) nbtstat

27. DNS name resolution is failing and you want to query DNS directly. Which command should you use?

A) netstat B) tracert C) nslookup D) ipconfig

28. A Windows administrator needs information specifically related to NetBIOS. Which command should be used?

A) nbtstat B) arp C) route D) ping

29. You need to inspect active connections and listening ports on Windows. Which command is the best fit?

A) nslookup B) netstat C) tracert D) ipconfig

30. Which pairing is correct for commands covered in this chapter?

A) Windows ipconfig / UNIX traceroute B) Windows tracert / UNIX ifconfig C) Windows ipconfig / UNIX ifconfig D) Windows nbtstat / UNIX ipconfig

Answer Key

1. B
2. A
3. C
4. A
5. B
6. C
7. A
8. B
9. B
10. A
11. C
12. A
13. B
14. C
15. A
16. B
17. B
18. A
19. C
20. A
21. B
22. C
23. B
24. C
25. A
26. B
27. C
28. A
29. B
30. C

Quick Memory Card

Cable Tester = wiring | Cable Certifier = performance | Toner Probe = trace | TDR = fault distance | ipconfig ↔ ifconfig |
tracert ↔ traceroute | nbtstat = NetBIOS
