

OC IT Projects — Chapter 1

Networks and Their Basic Components — Quiz

Instructions: Answer without looking at the answer key.

Q1. According to the training, a computer network is:

- A) A single computer connected to the Internet
- B) An interconnection of two or more computing devices
- C) A group of servers only
- D) A wireless device

Q2. Which example represents a Converged Network?

- A) A network carrying only files
- B) A network carrying only email
- C) A network carrying data, voice, and video
- D) A network containing only wireless devices

Q3. Which device can be considered a Host / End Device?

- A) Router
- B) Switch
- C) Laptop
- D) Firewall

Q4. What is the main purpose of an Intermediary Device?

- A) To act only as a user device
- B) To connect hosts to the network and help determine the path of messages
- C) To store user passwords
- D) To provide electricity

Q5. Which three types of Network Media are mentioned in the training?

- A) Copper, Fiber Optic, Wireless
- B) Bluetooth, Wi-Fi, NFC
- C) USB, HDMI, VGA
- D) Fiber, Satellite, Bluetooth

Q6. What is the purpose of a NIC?

- A) To connect a device to a network
- B) To route traffic between networks
- C) To provide web pages
- D) To broadcast data to all devices

Q7. What is the main difference between a Hub and a Switch according to the training?

- A) Hub connects networks while Switch provides Internet
- B) Hub broadcasts data to all connected devices while Switch sends it to the destination device
- C) Hub is wireless while Switch is wired
- D) They perform exactly the same function

Q8. A device connects two or more networks and determines the next network point for forwarding data. What is it?

- A) Hub
- B) Switch
- C) Router
- D) NIC

Q9. Scenario: PC1 sends data to PC2 on the same network using a Switch. What should the Switch do?

- A) Broadcast the data to every device
- B) Send the data only to the destined computer
- C) Send the data to another network
- D) Convert the data into wireless

Q10. Which statement is correct?

- A) A Server only receives data and never provides resources
- B) A Client provides resources such as email and web pages
- C) A Host can be the source or destination of a network message
- D) A Router is an End Device

Answer Key + Quick Revision

1-B | 2-C | 3-C | 4-B | 5-A | 6-A | 7-B | 8-C | 9-B | 10-C

- Host / End Device → source or destination of a message.
- Intermediary Device → connects hosts/networks and helps determine message paths.
- NIC → connects a device to the network.
- Hub → broadcasts data to all connected devices.
- Switch → sends data to the destined computer.
- Router → connects two or more networks and determines the next network point.
- Network Media → Copper, Fiber Optic, Wireless.
- Client → end-user device used to access a network.
- Server → provides network resources such as email, web pages, or files.
- Converged Network → transports video, voice, and data.

Session Result: 10/10
